

VOLUNTEERS NEEDED

For Research on Blast Exposure and Lung Health

Eligibility:

Veterans deployed to Afghanistan/Iraq (Post-9/11) who may have been exposed to a blast during their deployment. The purpose of this study is to determine potential effects of blast exposure on the lungs, heart and blood vessels.

Duration:

Your participation will involve 2 study sessions lasting 2-3 hours each. Sessions will include questionnaires, exercise and breathing assessments. In appreciation of your time you will receive compensation.

Location:

War Related Illness & Injury Study Center
VA New Jersey Health Care System
385 Tremont Avenue, 11th Floor
East Orange, New Jersey 07018
Principal Investigator: Michael Falvo, PhD
